

# The Stockholm Flat

By Formvision

**T**he challenge of making a space clear and airy while it remains cozy and is in its core a place of warmth and relaxation, made us create **The Stockholm Flat**. Although it veers more on the modern side, the interior features a mix of periods and styles to incite a feeling of layering and coziness. It is based on **Scandinavian interior design** and **the decorative styles of the Nordic countries** that emphasize clean lines, utility, and simple furnishings.

The flat is rich with natural lighting, very common in the North. The flat emphasizes the multiplicity of light sources and differentiation of luminous atmospheres, making the space appear bigger as it is a studio apartment. Large windows were incorporated to let in an ample amount of natural light that works wonders with the mainly white interior. The contrast that light creates makes impactful statements and accentuates the geometrical shapes of the furniture.

The white marble floors contribute to the sleek and modern look we went for in this flat, mixing in modernism with the traditionally **Scandinavian style**, adding luxury and elegance to the space. The wooden textures and furniture surfaces remain natural, building onto the established natural aesthetics. The colour palette is minimalistic and only two colours are present- the colour of grey and brown, which fit in beautifully with the shades of black and white. The colour of warm chocolate, honey, and earth make the room feel comfortable and sunny without using overwhelming bright colours and decor pieces.

As for the decor, the art pieces from **Danijela Gruban's Entropy collection** beautify the white walls of the flat, adding artistic value. This project presents the mix of **Scandinavian style** and modernism as the perfect solution to the question of how to architecturally solve an apartment of smaller dimensions. As it can be concluded, the key lies in organisation, simplicity, and the right use of natural light.
